# FB Newsfeed Replica/Mockup

What I would like is for someone to create, in html and css, a webpage that imitates the LOOK and FEEL of the Facebook newsfeed page. The page does not need to be functional - clicking links will not lead to anywhere, and you are not responsible for dynamically loading in any content, please use dummy content. However, you should try to mimic the fronted interaction as closely as you can.

This is part of a bigger project where I will use your code as a template and fill it in with my own content to create a "spoof" Facebook newsfeed.

Specification:

This is what the FB newsfeed looks like on my computer:

I would like you to create a html/css mockup which looks almost identical to the above.

The facebook newsfeed is already very modular, and you can feel free to mimic this modular structure in order to save time. You should only need to make each of these modules once. The key modules I have identified are:
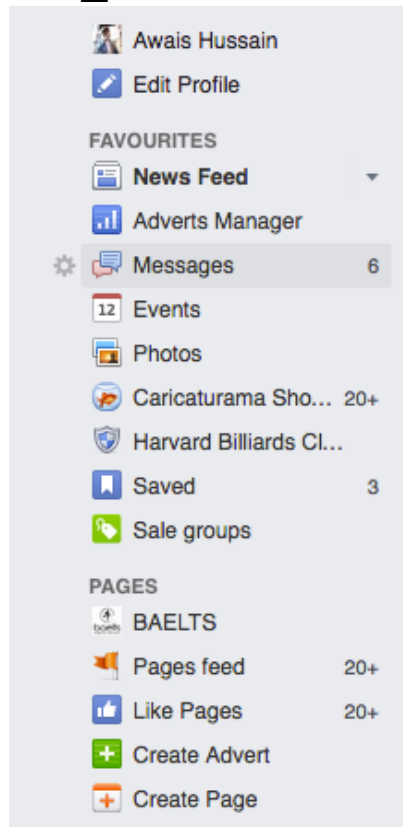

nav_bar

- notifications, messages, friends can be in an inactive or active state
- search box should be an editable text area but clicking 'search' does nothing
- nav bar always stays at the top of the page, even when scrolling through the newsfeed.
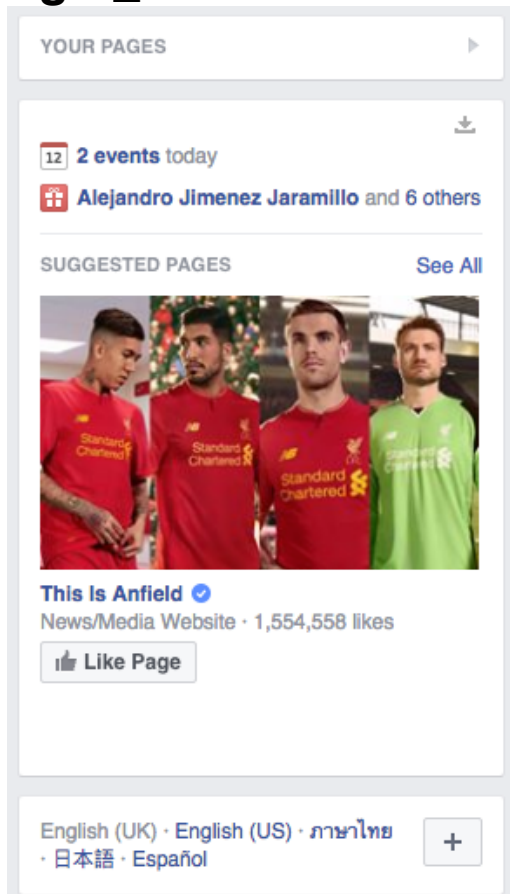

status_update

- editable text area
- "Public" button opens a dropdown menu.
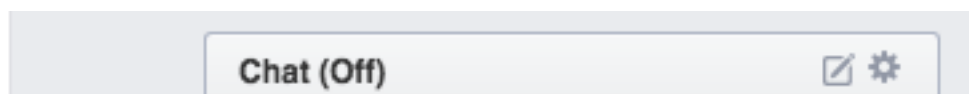

left_sidebar

 - be aware of the grey dark background on mouseover (seen here on the "Messages" item.

right_sidebar

- this can be copied directly

chat_box

- bottom right hand side of screen. Stays in position even when scrolling
- clicking this does not need to do anything. Do not spend time making a pop up chat box.

Write a comment...

- a post which links to an external site.

photo_post

- just one photo

photo_album_post

- more than one photo is presented like this

video_post

- videos are presented like this. They are playable from within the Facebook page itself.
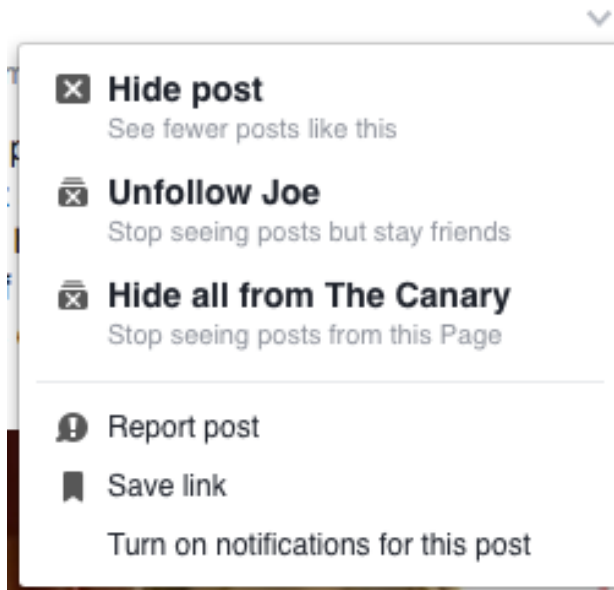

event_post

- events are presented like this. Similar to links, but different information is shown beneath the image.

comments_section

- some posts (of any kind) have a comments section displayed. This is what that looks like.

show_more

- clicking the arrow on the top right corner of any post brings up this pop-up menu.

Some small details to be pay attention to:

- Please try to get font styles and font sizes accurate.
- Use dummy content - I will fill the content in myself.
- Be aware of small interaction features (e.g. clicking a "Like" turns the "Like" blue)

Thank you!
